ON-SCREEN TAKEOFF

Digital takeoff technology continues to be one of the hottest areas of growth for construction technology. With that in mind, the applications that will stand out from the crowd are those that are continually enhanced for productivity improvement. In the past year, On Center Software has reinvested in its application, announcing the latest upgrades in On-Screen Takeoff 3.7. The handling and performance of PDF files has been improved in the product. In particular, the process of flipping through pages of a plan has been sped up using a combination of cached memory, color options, and algorithms. On Center Software also expanded the support of image file types to include Autodesk DWFX files. A second view window and compatibility with Windows 7 were among the other highlights of this upgrade to one of the most widely used digital takeoff tools in the industry.

**QUICK BID**

Speed and accuracy in the bidding process has never been more essential, and Quick Bid provides the enhancements to comply. The latest enhancements, delivered via Quick Bid Version 4.9, include a compatibility upgrade to support Windows 7, and the ability to export job budget files to many leading third-party accounting programs. A Material eQuote feature allows estimators to request and obtain pricing info from suppliers in a more streamlined manner. Pricing info is received via email and can be instantly imported into Quick Bid, which updates the bid instantly. Another new feature is a collaborative effort with supplier Armstrong to create an assemblies database to include its materials and assemblies into the Quick Bid database.
