

MORE INTEGRATION

On Center Software, www.oncenter.com, The Woodlands, Texas, has announced upgrades to two of its core products—On-Screen Takeoff and Quick Bid. While there are a number of new features, one benefit is integration between bidding and accounting just got a little bit easier.

The latest release of Quick Bid 4.9 has new accounting exports to Sage Master Builder from Sage, www.sagecre.com, Beaverton, Ore., QuickBooks from Intuit, www.intuit.com, Mountain View, Calif., Foundation Software, www.foundationsoft.com, Brunswick, Ohio, and Spectrum from Dexter + Chaney, www.dexterchaney.com, Seattle, Wash. This will allow companies to easily export bidding information to accounting applications. This Quick Bid release also has new pie charts for section markups, meaning the markup pie chart updates for the bid are based on the section selected.

The latest release of On-Screen Takeoff 3.7 also has new features, including 2D DWFX image file compatibility, enhanced color PDF (portable document format) support, and a new static 'second view' window, meaning the view window can now remain open when changing Takeoff and Worksheet tabs.

Additionally, the Open Database dialog can be sorted by size and date and the product has improved response time.

Both new releases have multiple other updates that will improve the overall performance and efficiency of the software, in addition to being compatible with Microsoft Windows 7.
