

ON-SCREEN TOOLS

Takeoff technology allows estimators and contractors to compare plan revisions and changes on the computer screen, speeding up estimating and takeoff processes and improving efficiencies.

With On Center Software's, www.oncenter.com, The Woodlands, Texas, On-Screen Takeoff product, estimators and contractors have been able to use the Overlay tool to compare plan revisions for a number of years, marking deleted items in red, new items in blue, and items that remain the same are grayed out.

In the latest version of On-Screen Takeoff 3.8, On Center has added new product features to its existing Overlay tool. For example, construction companies can now rotate overlay images as well as automatically resize and align overlay images.

Additional features in this version of On-Screen Takeoff include sorting capabilities in Open Database dialog box and enhanced PDF handling.

On Center has also released updates to its Quick Bid product. In Quick Bid 4.91, a new production view menu will give material size visibility, crew size and day visibility, and percent base column.

There are also more accounting exports to ComputerEase and Jonas Accounting, among others, and a new Bid Report Table to support third-party custom reports.
