

SPEC SHEETS

The *Walls & Ceilings* Special Spec Sheet Section will supply the building community with a unique guide to new and innovative products now on the market. This section is designed to be a year-long resource for specifiers and architects. Whether you save for your own files or forward these on to a colleague, the spec sheets will help you determine the right products for a job. Keep this January issue on file or simply tear out the pages as a handy reference for current or future use.

Quick Bid

Professional Estimating Software

Quick Bid, On Center Software's flagship product, was ultimately designed to increase an estimator's chances of winning more profitable bids. Quick Bid is the leading construction bidding software that fully integrates with On-Screen Takeoff® to create accurate bids quickly. By automating many of the bidding functions that were previously performed manually, common calculation errors are easily avoided and estimators can now bid and win more profitable projects. Quick Bid can facilitate quick adjustments, addendums, and recalculations to easily and efficiently send and receive material quotes from vendors, and ultimately **INCREASE SPEED AND ACCURACY ON EVERY BID.**

INCREASE ACCURACY

- Minimize data-entry mistakes
- Reduce calculation errors
- Quickly fine-tune labor production
- Analyze labor productivity within a condition
- Prioritize conditions by cost
- Evaluate detailed cost information
- Break down labor by crew, unit, price, lump sum price, production, or man days

REDUCE TIME

- Automatically calculate material
- Easily update price quotes
- Instantly generate material lists
- Quickly recalculate last-minute addendum changes
- Easily access a library of assemblies that store condition-specific material information

INCREASE OVERALL EFFICIENCY

- Analyze material and labor project costs by cost codes and/or CSI sections
- Evaluate job payroll budget by pay class
- Generate reports that break down stocking material by areas and/or CSI sections
- Generate paper and electronic reports for cost accounting
- Price change orders as they occur, separate from bid pricing
- Full On-Screen Takeoff integration

MATERIAL eQUOTE

Send and receive requests for proposal to and from vendors, then select the best price quote to use in your bid.

Many more features included...

ON-SCREEN Takeoff

Advanced Takeoff Software

On-Screen Takeoff is an intuitive construction-estimating program that is designed to drastically decrease your takeoff time and increase your accuracy. As the industry leader in takeoff software, On-Screen Takeoff allows estimators to view digital plans, PDFs, and CAD files as well as perform electronic takeoffs directly on a computer. Estimators can also quickly and accurately count, measure, and calculate lengths, areas, and volumes. On-Screen Takeoff was designed by construction professionals to help estimators **WIN MORE BIDS.**

WIN MORE BIDS

- Color-coded drawings with conditions and quantities
- Extend typical area quantities to all individual areas with Typical Groups feature
- Make area assignments or phase adjustments without having to complete another takeoff
- Compare two versions of a drawing with Overlay feature
- Visibly turn conditions on or off the plan image with Layers feature
- Automatically count repetitive symbols within a plan
- Send files with Project Express
- Full Quick Bid Integration

Many more features included...

Digital Production Control™

Instant Visual Work-In-Place Tracking

Digital Production Control integrates the estimating and takeoff process into a project-tracking program that allows you to digitally track labor production directly from the field to the office. The program's color-coded spreadsheet flags labor production problems in real time. This means potential setbacks or profit losses are quickly spotted and highlighted, so cost overruns are more easily avoided. Digital Production Control allows project managers to stay within the estimated budget and schedule to **COMPLETE MORE PROFITABLE JOBS.**

COMPLETE MORE PROFITABLE JOBS

- Instant color-coded visual feedback
- Calculating the percent complete on a weighted average basis
- Production line out and daily monitoring
- Send and receive project information via the Internet using Project Express
- Import and export accounting information
- Real time tracking and reporting real costs
