

# On Center Software Provides Technology to Help Construction Businesses Grow

**O**n Center Software is a leading construction-industry software provider that specializes in bidding, estimating, and project-tracking software. Founded by construction professionals, On Center Software's products are specifically designed to save time and money, from the initial takeoff to a project's completion.

## NEW THIS YEAR

On Center Software is dedicated to updating its products to meet the advancements within the technology sector. The past year has brought the company to the forefront of construction innovation, starting with the release of Quick Bid 4.91 and On-Screen Takeoff® 3.8. As On Center Software's flagship product, the newest version of Quick Bid provides users with even more accounting exports, like ComputerEase, Jonas Accounting, and Maestro Accounting. And in an attempt to fulfill customer requests and further improve the program's capabilities, Quick Bid now features a new Production View menu, with added material size vis-

ibility, crew size and crew days visibility, and a percent base column.

Not to be outdone, On-Screen Takeoff 3.8 has now redefined the term "overlay." On-Screen Takeoff's all-new overlay feature includes the automatic resizing and aligning of overlay images, the ability to rotate the overlay image independent of the base image, and an innovative de-skew function for the overlay image. Both On-Screen Takeoff and Quick Bid are fully integrated with On Center Software's innovative project-tracking program, Digital Production Control™.

Aside from new software advancements, On Center Software also offers the latest in estimating hardware, like the Digital Takeoff Table® 2. Building upon the technology of the first Digital Takeoff Table, the Digital Takeoff Table 2 integrates with On-Screen Takeoff and includes even more features to speed up takeoff time and increase accuracy. The Digital Takeoff Table 2 provides a paperless way to complete takeoffs,

without the discomfort of unfamiliar technology tools.

## IN THE FUTURE

On Center Software continues to innovate the construction industry with tools that are designed to make construction tasks faster and more accurate. The current climate of construction allows for no mistakes, and On Center Software's driving goal is to provide construction professionals with the technology they need to stay successful.
